

If you manage a large inventory or sell in an eCommerce environment, eCatalog is your answer.

- Are your product catalogs out of date before they are published?
- Would you like to work with your product information in a spreadsheet-like format?
- Do you need a quick and easy way to maintain Internet File Locations for your various product descriptions?
- Do you need historical data on sales and average prices to help you maintain your pricing?
- Do you need to compare prices against your competitor's to be sure your products are strategic priced?
- Do you need to publish your catalog on-line for eCommerce solutions such as eOrder or eSource?

Publishing Catalogs was never easier!

eCatalog, an exciting new product from Azox, helps Microsoft Business Solutions Great Plains users publish their catalog of Inventory Items quickly and easily. Working with items on a one-by-one basis can be very time consuming when your inventory contains hundreds or thousands of items. eCatalog gives you the ability to deliver an up-to-date catalog, essential in today's eCommerce environment, by making the maintenance of your Inventory quicker and easier.

eCatalog provides export capabilities to help you produce an on-line catalog, a paper catalog, or a customer-specific price sheet in a timely fashion. The catalog of Inventory Items can be exported in many formats including Text, Excel, eOrder and eSource. The automatic export of your Inventory Items to eSource provides a streamlined method for providing up-to-date product information for your on-line customers.

eCatalog Features

Functionality

- Browse and edit Inventory Items in a spreadsheet-like format
- Ability to cut and paste data between items and fields
- Lookup function provides the ability to look for data in any field
- Find and Replace function makes multiple changes easier
- Saves multiple window settings to provide customized windows for various purposes
- Easily switch between browse and edit modes allowing multiple users to edit different groups of items
- Record locking between Great Plains and eCatalog users so two users cannot edit a record at the same time
- Filters provided so you can work with subsets of items, such as items from a particular manufacturer or a particular product line
- Sorting of Inventory Items into logical sequences for viewing or editing
- Collaboration between users provided in item note column
- Import of data from dbf files, to create new items or to update existing items
- Security setup to manage user's rights to make Catalog changes
- Support of multi-currency List Price settings
- Customizable screen layout including column selection and order
- Access to HTML, PDF and image file locations for all items in a spreadsheet format
- Ability to enter *Additional Information* data for each item from Detail Window

Pricing

- Provides an Adjusted Cost column that can be used as a working field to determine the cost to be associated with an item
- Calculates Adjusted Cost as a linear function of Current Cost and Item Ship Weight and allows automatic update of the Standard Cost column
- Competitor's price column can be manually defined or imported from a dbf file
- Calculation of Competitor's pricing percent for comparisons
- Automatically calculates Average pricing percent, Number of Transactions, and Quantity Sold from your Historical invoices in Microsoft Great Plains to provide useful information for future pricing trends
- Ability to define Catalog price for use in the publication of paper catalogs
- Define and calculate "Default percent" for the Catalog Price
- Mass update of pricing columns based on Item Price Schedules and formula
- Assistance in selection of Price Group for an Item based on Historical Information

Export

- Export to Text file in Comma delimited or Tab delimited formats for ease of creating paper Catalogs
- Export of Catalog info to Excel format for additional calculations
- Export to eCommerce formats for Microsoft Great Plains eOrder or Azox eSource
- XML file creation function to export catalog in XML format
- All export formats support customization of the columns to be exported and the export hierarchy to be used
- Creation of Customer Price Sheets for price books that include specific customer prices
